Subject: Display 6-bit images under X11
Posted by Dr. Bernd Kappler on Mon, 23 Jul 2001 14:07:59 GMT

Hello.

Sorry! I guess, that this question has been asked before for many times, but I cannot find the answer on the net ...

Here is the question: How can I reduce the number of colors PV-Wave uses from true olors (the default of my X-Server)

to 8 bits without starting a new X-Server? I tried !D.N_COLORS=256 (which is a readonly field :-( ) and I tried

the Win32 keyword DECOMPOSITION=0, but none worked for obvious reasons. Can anybody help me with this?

Thanks and regards

Bernd
