I am struggling with the table widget. In particular, I wish to update a subset of the table. I use the command

```
WIDGET_CONTROL,wTable,SET_VALUE=SubTable,USE_TABLE_SELECT=[0,0,n,0]
```

to replace the top row in a row_major table widget. Doesn't work. My test program to replace bigger pieces causes a core dump.

A search of Deja.Com (can never remember the Google name) retrieves only other plaintive requests for help with tables. Any tips, tricks, etc, from knowledgeable users out there?

Here's a tip: re-think your program design
to trash the table widget. :-)

Cheers,

David
