Hi,

I am running IDL 5.4 under mac os 9.1

Is there any IDL routines for renaming and moving files? My situation is that I first save processed data in a temp file in a temp directory. Depending on the outcome, I will decide if I want to keep the file, and move it to a 'permanent' directory. It's quite tedious to do all these manually.

Harry

There are no internal IDL routines for that purpose. You should form
OS command line and then use SPAWN.

Cheers,

Altyntsev Dmitriy

If you save from IDL, quality control from IDL and save (or not) the final file, couldn't you use the CD procedure to go to the "permanent" directory?

Cheers,

Pavel
