Does anyone have a working URL to download the latest TeXtoIDL package (version 2.0?).

<http://physweb.mnstate.edu/mcraig/TeXtoIDL/> doesn't seem to be working...

Cheers,

Justin

I got a note from Mathew Craig that their server was down for a couple of weeks, but is back up today. (Applying the patch for code red worm did the trick.)

An alternative site for the TeXtoIDL package is at

<http://astro.uni-tuebingen.de/software/idl/textoidl/index.html> though this site doesn't have the strtok patch for V5.3 and later.

It has now :-) An "exit" in the perl scripts that generate the documentation on our website that was put in there for debugging purposes had never been removed. Result: the textoidl docu and astrolib docu had not been updated for a while. Mea culpa.
