Subject: incremental time data file Posted by Manish on Wed, 22 Aug 2001 10:18:39 GMT View Forum Message <> Reply to Message
Hi, I've only started using IDL recently, and was wondering if anyone can help me out. I need to produce a data file which steps through increments of time (1.04906 s) for an entire day, i.e. to produce a file which looks like:
00:00:01.04906 00:00:02.0992
23:59:59(whatever the last integer would be!)
Can anyone help out, but more importantly, does anyone understand what the hell I'm going on about!!
Cheers for your time,
Manish.
