I am trying to implement a local max filter
without loops. Has this been done?

(Given an array and a filter width, return an
array containing the array value if it is
a local max, 0 if not)

For instance,

3 4 7 2 6 4 9 8 3

would be

0 0 7 0 0 0 9 0 0

for a width of 5.

Kyle J.
