Subject: Reading a very large ascii data file
Posted by mvukovic on Fri, 24 Aug 2001 16:16:06 GMT

I am reading some large ascii data files in csv (comma separated
fields) format, and would like to speed the process up.

I recall someone discussing reading such files as binaries and then
converting to ascii after finding line breaks, but was un-able to find
the discussion on the group.

Can anyone offer pointers, code, or suggestions on who might have
discussed it (so that I can look again on the newsgroup).

Thanks,

Mirko
