Hi,

did someone have a shortcut list of the idl_wave mode of emacs?

regards
Reimar

Other than:

<http://www.strw.LeidenUniv.nl/~dominik/Tools/idlwave/idlwave.html#SEC2>

???

This doesn't cover everything, but certainly hits the good stuff. P.S.

You can get rid of the "C-c C-d" prefix with something like:

```
(setq idlwave-shell-debug-modifiers '(hyper))
```

Part of the doc blurb:

"If you set this to '(control shift), this means setting a breakpoint will be on `C-S-b', compiling a source file on `C-S-c' etc. Possible modifiers are `control', `meta', `super', `hyper', `alt', and `shift'."

And speaking of IDLWAVE, has anyone heard from Carsten lately? There are a few updates in the hopper which haven't made it since the 4.9d alpha was released in April.
