
Subject: PV-WAVE Device Copy Memory Bug in WinNT

Hi all,

I have an ugly memory bug using repeatedly the command

```
device,copy=[0,0,!D.X_SIZE,!D.Y_SIZE,0,0]
```

on Windows NT 4.0 SP 6, PV-WAVE Foundation 7.1 and 7.5.

Just try it (for i=0,50 do ...) and the Task Manager will show rizing memory consumption while the INFO,/MEM will show nothing special. The memory stays lost until the window is closed.

Any ideas???

Thanks, Guido
