I probably am misunderstanding you, but how about:

```
ridiculouslylong1 = ' ballksjdflljasldfkjalksfjdlkajsd lkasjdf ;lkajsdf lk  
;alkdsfj '  
rl2= ' ballksjdflljasldfkjalksfjdlkajsd lkasjdf ;lkajsdf lk ;alkdsfj '  
rl3 = 'ballksjdflljasldfkjalksfjdlkajsd lkasjdf ;lkajsdf lk ;alkdsfj '  
rl4 = 'ballksjdflljasldfkjalksfjdlkajsd lkasjdf ;lkajsdf lk ;alkdsfj '  
rl5 = ' ballksjdflljasldfkjalksfjdlkajsd lkasjdf ;lkajsdf lk ;alkdsfj
```

formatstring = ridiculouslylong1 +rl2 +rl3 etc..

-bob

- $\succ$

'kkkkkkkkkk'

At least, that's how emacs does it for me.

sean,

here are some examples of long string output with&without imbedded linefeed characters,

[illegible]

```
LF=string(10B)
```

[illegible]

best of luck,
george
