
Subject: Possibly O/T: printing IDL code in colour

[As this post concerns running the IDL application rather than the IDL language, I apologize in advance if it is off-topic. If there is a more suitable newsgroup for this question, I'd appreciate hearing about it!]

I'd like to print the coloured syntax listing in the edit window in colour on a colour printer. Is this possible?

If so, how do I go about doing it? (If not, I will suggest this to the development team as a possible future enhancement. It seems an obvious function to offer.)

Cheers,
Francis
