In the event handler, get the value of the draw widget and set that to
be the active window:

```
widget_control, Draw_ID, get_value=w_ID
wset, w_ID
```

You can also make the event handler return the focus to the originally
active direct graphics window.
Check out http://spot.colorado.edu/~romashki/idl/smart_w.pro to see how
the window focusing can be accomplished.
