Subject: ENVI regustration: poly/RST to shift/rotation

Hi all,

I have two images with a rotation+shiftX+shiftY transformation between them.
I need to register them. Using ENVI I can do polynomial/RST registration.
I have two questions:

1. Is there a reference where formulas for these types of registration
are described? (I don't think ENVI manuals contain them)

2. Is there a way to convert parameters of ENVI registration into rot+shift?

Thanks,

Ilya Zavorin
