
Subject: GUI Builder

Hi!

I'm a complete newbie to IDL so my question could sound silly,

but is there any way to convert widget definition code files (*.pro) into resource definition files *.prc (GUI builder for Windows). The case is that I have a number of widget definitions as *.pro and want to change interface interactively and then regenerate widget definition files.

I realize that IDL don't provide such a possibility but it seems not impossible to me.

Best regards,

Vladimir Pisarevich

I think David has addressed this issue more than once. GUI builder (of which I am deprived working on the Mac) seems to produce code that is fairly difficult to reuse and adapt to real projects, especially if your GUI is supposed to be interactive. It pays to write GUI yourself, and it does not take a lot of time or practice.

Cheers,
Pavel

P.S. And for the purpose of IDL-project management, does manually changing extensions help?
