I use the newsreader trn to read News. trn is the threaded version of rn - which basically means its alot easier to follow a thread. For some reason comp.lang.idl-pvwave doesn't seem to be threaded - at least not at this site. My questions are:

- 1) Is it just something strange here that comp.lang.idl-pvwave is unthreaded?
- 2) If not why is comp.lang.idl-pvwave unthreaded and can it be made threaded?

Thanks in advance

John Black.
