When i have created the GUI file *.prc and edit the procedures on the _eventcb.pro file, the widgets in the created application are not active. I click at the open file from the menu but nothing happens. How widgets becomes active? What commands should i add at the procedures?

Widget gui bilder ?

There is a menu entry to write a idl_source for the gui and the
eventhandler.

Then you have to start the idl source for the gui.

This should be all.

regards
