Yes I know this sounds simple, and it probably is, but for the sake of young guns like me why don't we humor me. I want to know what command I can run to get the widget ID of the supplied widget.

Something along the lines of:

slider = WIDGET_SLIDER(etc...)

WIDGET_INFO, slider, GET_ID
or something of the like?

Talk to me!

-Adam

Hi Adam,

You mean slider ID is not saved in the Uval of the top-level base (or in self for the object minded guys). AFAIK, Widget_info as a Find_by_Uname keyword precisely for this purpose.

so:

,***** Event handler *****

```
SliderID=widget_info(event.top,find_by_Uname="my slider")  
If (slider NE 0) then print, "slider ID is : " + strtrim(sliderID,2)
```

```
;*****Main*****
```

```
..  
void=Widget_Slider(base,.....,Uname="my slider")  
..
```

I hope this helps,

Thomas

Did you know netiquette ?

If you don't know Arlene H. Rinaldi then you have missed something
and should read the following:
<http://www.fau.edu/netiquette/net/trans.html>

cheers

Oh, I get it. Sarcasm. Ha ha.. that's funny.

Hang on... you *are* kidding right? :o\

I'm confused; what's your problem with David's answer? It is, as far as I can tell, correct and relevant.

This is one sick posting. If it is a joke, its not funny. If you are serious, change the newsgroup.
