I created a little procedure to plot Shapefiles with IDLffShape.  
However, it has a memory leak. Can someone point out a plug to stop my  
memory leak?

The routine works great, but when I have to add graphics to 800 images,  
I run out of memory at around 500 images.

A sample routine is available at ...

`ftp://ftp.cira.colostate.edu/Dean/teststate.pro`
