
Subject: IDL Slider Widget with discrete values

Hi,

I'm trying to make a slider which would show (and return of course) the following 3 values: 25, 50, 100 and nothing else.

Someone from RSI told me how to make a slider which would only stop on these values but when I move the cursor I still see the other numbers. I first thought it would be quite easy to pass a vector containing the allowed values to the widget but it ain't so.

Any answers or hints would be very welcomed.

Jeff
