Subject: ION data reuse
Posted by Ken Mankoff on Fri, 07 Dec 2001 19:16:02 GMT

Hi,

I would like to produce two images in an ION page, but use the same dataset for each image. This dataset is large, and I only want to load it once. Here is the current setup:

1) user fills out a form specifying lat/lon boundaries. Submit button loads a new ION page

2) ION page loads lat/lon region from global file, displays. All this happens in an <ION_IMAGE> tag

3) Repeat (2), but do some additional processing before displaying.

Since the exact same lat/lon region is read off disk in (2) and (3), it in inefficient. Does anyone know how to load it only once?

Thanks,
 -k.
