has anyone noticed

http://www.rsinc.com/services/output.cfm?tip_id=3272

- HASP licensing isn't supported at all with Windows XP, and RSI want Windows users to post back their HASPs (free postage, thanks). I hope Windows XP compatibility mode works for IDL?!

Richard IDL5.3/HASP/Windows Me user

None of my business but isn't XP by itself is a good example of licensing nightmare? And why would anyone want XP when 2000 is here?

Pavel

Maybe yes, so it's a pity RSI are copying it... at least Windows is an entire operating system, and only \$200. Since Windows is (like it or not) bundled with almost every new PC, there's not much need to transfer it around - but IDL is comparatively uncommon, and expensive, and I'd like my own personal, licensed, copy to use anywhere. Maybe RSI prefer to deal only with large institutions with dozens of fixed workstations - wish I'd known this sooner. Photoshop (another expensive, high-power 'industry standard' PC/MAC application) is licensed for use on one user's desktop PC and laptop (if I recall), and uninstalled / reinstalled freely, like IDL until now.
