Hello,

i want to display two images on one position. I do this by using the attached Code because i don't want the pixels of IMAGE being erased when using the TV function for HIGHLIGHT.

My Question:

- Is there a shorter way to display two images like in the code ?
- Is it possible to set some of the pixels of one image transparent ?

Can anyone help ?

TV, image

LoadCT,5

FOR x = 0,510 DO BEGIN

FOR y = 0,510 DO BEGIN

IF highlight(x,y) NE 0 THEN TV, highlight(x:x+1,y:y+1),x,y

ENDFOR

ENDFOR
