I read on RSI's web site that they're offering a pre-release version of IDL for Mac OSX some time this quarter. Does anyone have details about signing up for this "beta test?"

Thanks,

Tim Lloyd, lloyd@lasp.colorado.edu
"There is something to be learned from a rainstorm. When meeting with a sudden shower, you try not to get wet and run quickly along the road. But doing such things as passing under the eaves of houses, you still get wet. When you are resolved from the beginning, you will not be perplexed, though you still get the same soaking. This understanding extends to everything." -Yamamoto Tsunetomo

I don't, but if anyone at IDL is monitoring this, I'd be interested in signing up for any beta as well - I'm a Matlab user who has moved to the Mac OS X platform, and am considering switching my data analysis tools over to IDL if they are going to support this platform better.
