Subject: Tab stops in IDL text widgets.

I've noticed that the width of tab stops in IDL text widgets seems to be set to some large number, such as 10 or 12, while the ordinary behavior of the editor (e.g. EDT, EMACS) used to create the file uses a standard tab stop of 8 characters. Thus, the appearance of the file in the text widget is quite different than the appearance of the file when it was being created. Things that line up when editing the file don't line up when viewing it. Is there any way around this?

Bill Thompson
