---

Just wanted to let the few people out there running MacX and IDL know that Apple's System Update 3.0 (available on <ftp.apple.com> in `dts/mac/system.update` - or close to that) corrected the graphics window crashing that has been complained about in the past. My testing has not been thorough, but the simple tasks that used to crash the system no longer cause problems.

System setup: Mac Ilci with on-board 8-bit graphics, System 7.1, IDL 3.5.0 on SunOS 4.1.3.
