Hey - I've been getting the same message! I can, however, still compile and use the routines in
the listed directory so I haven't worried about it. I do believe the offending directory is the
last one I created in my idl source directory...maybe that has something to do with it??

If you find anything out, let me know (it's low on my annoyance radar so you can be sure I
won't investigate it... :o)
