Subject: about file operation in DLM
Posted by xje4e on Fri, 15 Feb 2002 21:39:24 GMT

Hi, there,

I have a question:

I make a DLL using C. In this DLL there is a function that opens a
file to read and write. I put the DLL in IDL environment,
\IDL\bin\bin.x86\. I called the function from IDLDE. So where should I
put the file that I want to open so the program can find it?

I tried to put the file into the same directory as the DLL, but it can
not find it.

Any suggestion will be appreciated!
