Hi!

I have the following problem with IDL. I want to produce a contour within an image of an visualization with the following command:

```
CONTOUR, scr,LEVELS=[1,4,8,16],ZVALUE=1.0, /T3D, /NOERASE
```

But I got the error message:

```
% CONTOUR: Illegal 3D transformation
```

scr is an array of integer with 150x150: scr = intarr(150,150)

I use IDL 3.5. Can anyone help me?

Many Thanks

Christian Lenz
