
Subject: CALL_EXTERNAL using C/Fortran shared library on HPUX11

I'm using a shared library compiled of C and Fortran codes.
When I run IDL, I get an error

can't shl_load() a library containing Thread Local Storage:
/usr/lib/libF90.1

But I have to use -IF90 to resolve Fortran symbols. Any idea
how to resolve this problem? Thanks in advance.
