Subject: Has USERSYM been defined?

I think the answer to the following question is "no" but it is worth a
shot.

Is there any way to determine if a user-defined plotting symbol has
been created using USERSYM for plotting with PSYM=8?   (I suppose it
might also be nice if one could determine what the user-defined symbol
actually is, i.e. fetch the X,Y vectors that were input to USERSYM, but
I don't need that now.)

I want to have my plotting program use the current USERSYM definition
for PSYM=8 if it exists, but to create a default symbol if no current
USERSYM definition exists.

Thanks, --Wayne Landsman   landsman@mpb.gsfc.nasa.gov
