
Subject: IDL on mandrake 8

Hi,

I'm running Mandrake 8 on a linux box at home, and am trying to get idl 5.2 running (it's old because that's what we run at work). So far I've figured out that there are library problems, but I'm not sure how to solve them. Has anyone else tried to install IDL on a Mandrake linux box and got it to work?

Thanks in advance,
Simon
