Hi, everybody,

I am a beginner in idl-pvwave. I am currently working in Image Restoration and I want to use PV-Wave as one of my research tools. Is there anyone using PV-Wave to implement image restoration algorithms such as Wiener filter, constraint least-square, ME (maximum entropy), etc. ? If so, may I have some samples of these sources. In addition, is there any ftp sites available for me to get PV-Wave sources (sources particularly for image processing).

All helps will be greatly appreciated.
Thanks in advance.
