had it too.
it seems that i had to re-enter the bash shell..
and then open up another bash... in the same command line
and then it all worked out again!
don't ask me why this worked :)

Hi,

here is the solution for Suse, may be work by RH too.

make a new window

Select "Einstellungen" (may be control ?)

then select "Tastatur" (may be keyboard)

then select "linux console"

Don't forget to save below "Einstellungen" in the first menu too.

For KDE konsole

right click and select Keyboard->Linux console. If you want to always
have this, then Save Settings.

xterm and gnome-terminal don't have the same problem. Maybe on your other system you are using Gnome as the desktop?

Fabulous. Yes, this was the difference, and this solution works. Many thanks.

Risa
