
Subject: IDL, scripts and command line arguments?

Does anyone have any suggestions on ways to trick IDL into getting access to command line arguments (argv- and argc-like functionality)? The only trick I've come up with so far is to write a script in <scripting-language-of-choice> that writes an idl procedure with the parameters hard coded into it and then executes it. It's not very pretty though and I wonder if there are any other possibilities...

Mike
