I don't know if this is possible. I have 4 coefficients, a,c,d,cd, that are each 3191-long arrays, and I would like to construct 3191, waveforms (of length 128) from these coefficients.

```
x = FINDGEN(128)
yfit = FLTARR(128,3191)
```

In the end, I would like `yfit` to be an array of (128,3191) or (3191,128).

THANKS!!!!!!
