A question concerning memory space and dlm usage. I am working to separate a set of test code from my dlm project into a second dlm. The test code creates/loads/deletes a number of temporary test files. I discovered a file loaded by C code from one dlm cannot be accessed by C code in another dlm. (All file loading/unloading occurs within C code, not the IDL environment.)

Is this correct?

As always,
Ed Wright
