Hi,

I have a tiff image of size 1200x379. To open that file i wrote:

```
filename = FilePath(Subdirectory = ['Akhila', 'Project'], '8bit.tif')
OpenR, lun, filename, /Get_Lun
ReadU, lun, image
Free_Lun, lun
image = bytarr(1200,379)
image = read_tiff(filename)
tv, image
```

The image that is opened is not the complete image. I guess i'm missing on something....Can anybody please help me with that.

Thanx in advance.

Akhila.
