Hi all,

I have an IDL structure variable like this:

```
help, ccc
CCC      STRUCT = -> <Anonymous> Array[1]
```

```
help, ccc, /struct
NAME      STRING  Array[133]
RA        DOUBLE  Array[133]
```

and I would like to reform it like this

```
help,ccc
CCC      STRUCT = -> <Anonymous> Array[133]
help,ccc,/struct
NAME      STRING      g01
RA        DOUBLE      316.022
```

Is there any fast way to do it?

Thanks a lot.

Ivan
