
Subject: idl running under server...

I wrote a perl script that takes form data and executes an idl program, returning graphics.

It works fine when I run it from the command line, but idl doesn't do a thing under the server.

Anyone has an idea ?

The differences I could tell are:

- different environment variables (no IDL_PATH, IDL_DIR)
- different user/group (nobody/nobody).
- ...?
