Hi *,

Does anyone know how to use SOCKET to fill out a POST form?

GETs are easy... You just append the form data after the URL:

```
line = ''
```

```
SOCKET, lun, 'www.google.com', 80, /GET
```

```
PRINTF, lun, 'GET http://www.google.com/search?q=IDL+socket+post'
```

```
WHILE ( NOT EOF( lun ) ) DO BEGIN readf, lun, line & print, line
```

but I cannot figure out how to POST data...

Any help appreciated.

Thanks,

Ken Mankoff
