where is the faq for this newsgroup?

I tried ftp to ersg.ucsb.edu, but got "unknown host".

Then I went to ucsb.edu, and in pub/graphics found idl.tar.Z

which is apparently a release of idl (!!??)

Actually, what I really want to know is if there are workarounds to the bugs in contour, /fill routine, where the area is not filled. These seem to be most apparent when there are missing data values, and when map_set is used. Thanks in advance...
