Hello, all,

When I run the program aviKRtest downloaded from
www.kilvarcok.com/freesoftware/dlms/avi.htm

I got the error messages:

% AVI_OPENW: Unable to create avi compressed stream

% AVI_PUT: Expression must be an array in this context: AVIPARAMS.

% Execution halted at: AVIKRTEST

Did anybody met such situation before? Could you let me know how
did you solve it?

Thanks a lot.

Helen

Since you don't show us what "A" is, I'm going
to give you the benefit of the doubt and say
maybe it did work with an index of 32. But
my guess is that your index is not 2 when the
problem occurs. Send us the result of "Help, a",
and then print out the indices in your loop.
Tell us the value when the error occurs.

Cheers,

David
