Hi, all

This is a segment of HEX: 00 00 00 64

there are two 2byte-integers in it.

But when I set

a=0

readu,lun,a ; I hope a=hex(00 00)

print,a

the result is 100. That's a=hex(00 00 00 64)

that's the same as "a=0I readu,lun,a"

how to read 2byte integer then?

Tom
