Hi there,

Can someone tell me how to display a widget_table in a activeX
IDLDrawWidget.

It seems that the only valid container for a widget_table is a widget_base
and this
create an IDL window. I would prefer to use a MFC wich contains a
IDLDrawWidget.

thanks in advance !!

Eric Fournier

You can't. The activeX IDLdrawWidget cannot contain other widgets.

If you really want to go this way your only choice would be to embed an
Excel spreadsheet com object or some other table object.
