
Subject: IDL_TOOLS Sound routines

I discovered the IDL_TOOLS sound routines (in the freeware section of www.rlkling.com), and they do just what I was looking for-- I can now play my own beeps and boops in IDL. But it looks like IDL's native beeps and boops (like the one in the DIALOG_MESSAGE function) go away when the IDL_TOOLS routines are loaded. Is this a bug or a feature?
