Is there any form of replacement for insight in IDL 5.5 for linux ?

I think I know why it was removed, i.e. some problems with gif formats.
Will there ever be a tool for making plots, and their elements objects. Does this exist in IDL in any way that I just do not know about? Also, is there a tool for keeping projects together in some organized fashion, a la a tool like igor or origin that is built into IDL currently?

Thanks in advance.

Let me know when you get enough for a couple of beers.
I'll come up and celebrate with you. :-)

Cheers,

David

This coming weekend, alright? Got enough for a couple of beers already :-)

Cheers,

Pavel
