
Subject: call_external: passing string from IDL to C

Hi,

I am trying to pass an IDL string to C using call_external. My setup is:

IDL 5.5
Visual C++ 6.0
Windows 2000 Workstation
P4 2Ghz, 512 mb

I can't even get IDL's example to pass a string from IDL to C. I built the DLL from \RSI\IDL55\external\C\string_array.c. Then I debug the DLL from Visual Studio, and run string_array.pro. In debug, C receives an IDL_STRING structure with the proper length of the string (not counting NULL char). But you cannot see the string itself. You see

"CXX0030: Error: expression cannot be evaluated"

Has anyone gotten the example routines to work?

Thanks,
Selwyn Yee
