Hello,

I would like to compare two arrays of different size. What I want to know is if the two arrays share ANY of the same values, regardless of index.

e.g.

Array1 = [1,2,3,4,5]

Array2 = [5,6,7]

Comparing these two arrays should return true because they both have the value 5.

I know I could do this in a loop, but I need the speed and I'm sure IDL can do this in one line. I'm just not sure how.

Thanks,

Sean Raffuse

You could use my set manipulator. For example, in your A AND NOT(B) case,

IDL> a = [0,1,2,3,4,5,6,7,8,9]

IDL> b = [0,5,9]

IDL> print, cmset_op(a, 'AND', /NOT2, b)

1 2 3 4 6 7 8

or

IDL> print, cmset_op(a, 'XOR', b)

1 2 3 4 6 7 8

Hope that helps!

Craig

P.S. Please see <http://cow.physics.wisc.edu/~craigm/idl/> under "Array/Set"
