Try something like this, after you have put the new text into the text widget:

```
Widget_Control, textID, Get_Value=theText
theText = theText[0]
Widget_Control, textID, Set_Text_Select=[StrLen(theText)-1]
```

Cheers,

David

Oh, oh. I just re-read your post. Sounds like you might have a multi-line text widget, and I stole the example above from a single-line text widget. You will have to modify the code to cope with whatever you have, but you get the idea.

Cheers,

David
