Hi all

We are pleased to announce our IDL book, written in German.

Title:

Praxisbezogene IDL Programmierung

Authors:

M. Busch, R.Bauer, H.Heer, M.Wagener

ISBN: 3-89336-308-4, EUR 44,00

Abstract

The book contains an introduction to the programming language IDL, version 5.5. The IDL scripting language itself, working within the IDL development environment and important visualization routines are introduced. The book addresses novices to programming as well as experienced IDL programmers.

The focus of this book is on nuts and bolts problems arising in the natural sciences, and their solutions. The special characteristics and possibilities of array-orientated programming are pointed out. Important language elements and hints are highlighted.

More than a hundred complete programming examples, of which are several described in the book, are accessible at the URL
<http://www.fz-juelich.de/vislab/idl-beispiele>
These examples encourage use as a playground for autodidactical IDL studies.

A clear organisation and the use of up-to-date, structured language elements render this book suitable as a course companion as well as a reference in everyday work with IDL.
